

Final Project Proposal

December 8th, 2017

Project Overview

Our group's final project will be an informational website for the Interactive Media Design program, using all of the techniques learned in class (ie. Sass and Bootstrap). This website will include teachers in the program, the classes they teach, and their contact information, as well as feature some of the courses you can take, who teaches them, and a brief overview of the classes. The intended audience for this website would include any future students who may be interested in this program, students in the first year of this program who may be curious about the second year curriculum, and potentially teachers/students enrolled in other programs or attending different schools. The final deliverable of this project will be uploaded to GitHub.

Project Management Plan

In order for our team to successfully collaborate on the project, we have already set up a group chat via Messenger. We also have milestones outlined on GitHub in order to see when important dates for the project are and deadlines we need to meet. Issues (tasks) have been assigned to each milestone that will be delegated evenly amongst all team members. Our team has made use of the "labels" feature in order to organize issues. For example, any unassigned tasks are labeled "unassigned task" and colour-coded green to show that the task is available to be assigned to a team member, tasks that incomplete are labelled as such, and are colour-coded red, etc. We currently haven't decided on when we want to meet to go over progress on the project outside of class, but since we frequently communicate through Messenger, it won't be difficult to contact each other about updates and share files with each other.

Specifications

Our team has decided to feature the following teachers and courses for the project:

Teachers	Courses
1. Hussein Tayrani	1. Motion Graphics
2. Michael Eisenbraun	2. Server-Side Web Development
3. Susan Murphy	3. Project Management

Milestones

1. Week 9—Final Project Proposal [✓]

2. Week 10—Final Project Mockups

Completion of either wireframes or high-fidelity mockups to show visual representation of the sites structure, styling and visual components. Style choice will be decided on by end of class week 9, and team members will be assigned sections of the website to design.

3. Week 11—Final Project Progress Report

Oral progress report covering the status of the project. Feedback from classmates may be obtained during this week, and our team will be going over potential revisions or anything we may need to fix design-wise.

4. Week 12—In-Class Lab

Time for our team to continue working on the project/finishing up the project.

5. Week 13—Final Lab/Submit Project

Last class to make any final changes to the project/ensure everything is working before Submitting the project.
